

Assignment ON8

Elmer V Villanueva

Due at 3:55 PM on Monday 20 April 2020

Instructions

You must attempt all questions. All answers must be submitted on ICE. The *ONLY* submission format accepted is an RMD file.

Data

We will use the same data as Assignment ON5. Recall that Son et al. [1] studied 100 caregivers of older adults with dementia in Seoul, South Korea. The dependent variable was caregiver burden as measured by the Korean Burden Inventory (KBI). Scores ranged from 28 to 140, with higher scores indicating higher burden. Explanatory variables were indexes that measured the following:

- **ADL**: total activities of daily living (low scores indicate that the elderly perform activities independently).
- **MEM**: memory and behavioral problems (higher scores indicate more problems).
- **COG**: cognitive impairment (lower scores indicate a greater degree of cognitive impairment).

Table. Data from 100 caregivers from Son et al.

ID	KBI	ADL	MEM	COG	ID	KBI	ADL	MEM	COG
1	28	39	4	18	51	88	76	50	5

50	49	63	32	15	100	88	81	66	1

Questions

1. (5 marks) Find the multiple regression equation describing the relationship among these variables. Produce the regression equation.
2. (20 marks) Calculate the residuals and predicted values and add it to the data set.
3. (10 marks) Test the assumption of linearity. What do you conclude?
4. (10 marks) Test the assumption of normality of residuals. What do you conclude?
5. (10 marks) Test the assumption of equal variance of residuals. What do you conclude?
6. (10 marks) Test the assumption of independence. What do you conclude?
7. (10 marks) Test for the presence of multicollinearity between the predictors. What do you conclude?
